PROJECTS

House Price Prediction using ML.

- **Objective:**The objective of house price prediction using machine learning is to develop a predictive model that can accurately estimate the selling price of a property based on its various features, such as location, size, number of bedrooms and bathrooms, and other relevant factors.
- **Description :**Machine learning algorithms are used to analyze a large dataset of past house sales, identifying patterns and correlations between various features and their corresponding sale prices.These algorithms then use this information to create a predictive model that can be used to estimate the sale price of a new property based on its features.
